MODULAR WATER TREATMENT SYSTEMS

Designed for production of water for human consumption, these plants are turnkey solutions, with automatic operation and ready to work. They are ideal for purifying water from surface sources including municipal water for domestic purposes or small water bottling plants.

Application:

- Production of drinking water in accordance with national and international standards
- Application in water bottling

Benefits:

- High-quality solution, simple and modular
- Meets the requirements for drinking water production, guaranteeing great versatility of treatment in relation to various contaminants including microbiological parameters, turbidity, hardness, iron, manganese, among others;
- Modules can also be mounted on the walls
- Compact and robust solution;
- Easy installation and operation, with reduced construction work;
- Closed system and pressurized-avoids external contamination;
- Tested at the factory and ready for use-turn-key solution;
- Operated manually or automatically;
- Low maintenance costs;
- Low operating costs;
- High operating efficiency;
- Equipment subjected to rigorous quality control.
